Bankruptcies in Fracking Sector Mount in 2019

*E&P Companies’ Debt of $26 Billion Doubled Over Previous Year*

Bankruptcies among fracking-focused companies exploded in 2019. The 42 bankruptcy filings among Exploration & Production (E&P) companies in 2019 involved nearly $26 billion in debt – double the $13 billion in bankruptcy-related debt filed in 2018.¹

“Following a steep drop in oil prices in the fourth quarter of 2018, there was a sharp increase in the number of filings in 2019,” reported Haynes & Boone, a legal firm that publishes a quarterly report on bankruptcies.

After years of mounting debt and negative cash flows,² the fracking sector has experienced an ongoing wave of bankruptcies over the past five years. Natural gas prices, which dropped by a third in 2019, and persistently low oil prices throughout the year that averaged $57 per barrel³ compared to $65⁴ the year before, pushed 42 companies focused on unconventional production of oil and gas to file for bankruptcy protection in 2019.

Moody’s concludes that the oil and gas industry never “fully recovered” from the 2015-2016 oil price slump.⁵

All told, 208 North American oil and gas producers declared bankruptcy between January 2015 and December 31, 2019, affecting more than $121 billion in debt.⁶

2019 saw an especially large uptick in bankruptcies among E&P companies. In just the first nine months of 2019, these bankruptcies had already involved nearly $13 billion in debt, compared to $13.2 billion in all of 2018 and $8.5 billion in 2017.7

Subsequently, in the fourth quarter of 2019, nine fracking-focused companies filed for an additional nearly $13 billion in debt to be restructured or written off, which sent the 2019 total ballooning to $25.8 billion, nearly double the 2018 level.

Bankruptcy filings in the oilfield services sector, which relies heavily on the fracking industry for revenues,8 also doubled in 2019 compared to 2018. More than $8 billion in bankruptcy filings were recorded in 2019, compared to less than $4 billion in 2018.9 The oilfield services sector has gone through nearly 200 bankruptcies involving more than $66 billion in debt since 201510 – including, in May 2019, the insolvency of Weatherford International, formerly the world’s fourth-largest oilfield services company, which must restructure $7.6 billion in long-term debt.

Schlumberger and Halliburton,11 the world’s largest oilfield services companies, recorded significant losses in 2019, with Schlumberger writing off $12.7 billion in Q4 2019, an amount that Tudor Pickering, an investment bank that focuses on the oil and gas industry, suggested was “eyebrow-raising.”12

More bankruptcies are all but certain, as oil and gas borrowers must repay or refinance more than $100 billion dollars in debt over the next few years.13

Hardest hit have been the Appalachian frackers, which primarily produce natural gas. Their already-battered stocks have been further pummeled since the beginning of the year, as gas prices continue to decline.14 The largest of them, EQT, took a $1.8 billion write-off in Q4 2019, and reduced its workforce by 25 percent in 2019.15

Chevron walked away from its Appalachian shale gas holdings in December 2019, taking an impairment charge of more than $5 billion.16 It has put its shale assets on the market, but energy consultant Rystad expects it will get far less than the more than $4 billion it paid for these assets.17

Appalachian producers are now facing a wave of debt, which will be nearly impossible for them to repay with gas prices below $2.00/MMBtu. Their cash flows had already been negative\(^{18}\) even with much higher gas prices. IHS Markit sent shock waves through the market in September 2019 by suggesting that gas prices would continue to plummet, reaching levels not seen since the 1970s.\(^{19}\)

Just eight E&P companies with a significant presence in Appalachia\(^{20}\) face $29.95 billion in long-term debt. Their market cap, as of January 24, 2020, is just $12.4 billion. (See Figure 1.)

As of September 30, 2019, the long-term debt of those eight frackers will mature between 2021 and 2027, with more than $4 billion maturing in 2022 (see Figure 2.)

Conclusion

The significant uptick in bankruptcy filings in the E&P and oil services sectors in 2019 illustrates the increasingly speculative character of the industry as its financial rationale of high risk and high reward deteriorates. High risk is now producing chronic value destruction. Bankruptcies among U.S. frackers accelerated in 2019, with 42 companies filing for bankruptcy, affecting $25.8 billion in debt – nearly double 2018 levels. The oilfield services sector, which relies on revenues from E&P companies, also saw bankruptcy filings double in 2019.

The inability of the sector to adapt to a low-priced oil and gas environment has now produced decade-long negative cash flows among oil and gas producers, resulting in increasing numbers of bankruptcies as both lenders and equity investors have largely abandoned the sector.21

Given the massive wave of debt facing E&P companies, more bankruptcies are all but certain. The global glut of gas and oil is expected to continue. Natural gas prices are dipping to levels not seen since the 1970s. And even political tensions and outright attacks in the Middle East don’t cause oil price spikes to last more than a few days.

In this environment, it is difficult to see a financial pathway forward for oil and gas producers.

About IEEFA

The Institute for Energy Economics and Financial Analysis conducts research and analyses on financial and economic issues related to energy and the environment. The Institute’s mission is to accelerate the transition to a diverse, sustainable and profitable energy economy. www.ieefa.org
